

Beocord 6002 Type 4851, 4852, 4853, 4854, 4855, 4856, 4857

Beocord 8004 Type 4861, 4862, 4863, 4864, 4865, 4866, 4867

DIAGRAMFORKLARING

De enkelte diagramsider er mærket med et bogstav f. eks. DIAGRAM A.

På diagrammet er der angivet type numre på transistorer og IC'er (f. eks. TR30 BC557B) i de tilfælde, hvor type nummeret er entydigt for komponentens placering i et kredsløb. Hvis positions nummeret er efterfulgt af en stjerne (f. eks. TR101*) **skal** reservedels nummeret benyttes, da denne komponent er specielt udvalgt.

LEDNINGSFORBINDELSER

Ledningsforbindelserne på diagrammet er samlet i »bunder«. De enkelte ledninger er forsynet med koder, der fortæller hvortil de går.

INTERN FORBINDELSE PÅ EN DIAGRAMSIDE

Interne forbindelser på en diagramside angives med et tal. Knækket på ledningen viser i hvilken retning den anden ende af ledningen findes.

FORBINDELSE TIL EN ANDEN DIAGRAMSIDE

Forbindelsen til en anden diagramside angives med et tal, samt bogstav indikation på det diagram forbindelsen går til.

DIAGRAM EXPLANATION

The individual diagram pages are marked with a letter, e.g. DIAGRAM A.

Type numbers of transistors and ICs (e.g. TR30/BC557B) have been indicated on the diagram in those cases where the type number is unambiguous for the position of the component in a circuitry. If the position number is followed by an asterisk (e.g. TR101*), the spare parts number **must be used** because this component has been especially selected.

WIRING CONNECTIONS

The wiring connections on the diagram are assembled in »bundles«. The individual wires are coded to indicate to where they are leading.

INTERNAL CONNECTION ON ONE DIAGRAM PAGE

Internal connections on a diagram page are indicated by a number. The bend of the wire indicates in which direction the other end of the wire may be found.

CONNECTION TO ANOTHER DIAGRAM PAGE

Connections to another diagram page are indicated by a number, as well as by a letter indication of the diagram to which the connections lead.

ELEKTRISKE JUSTERINGER

Elektriske justeringer af Beocord 6002/8004 foretages som vist side 6-4, 6-5 og 6-6. Enkelte justeringer i Beocord 8004 er ændret i forhold til Beocord 8002 (se nedennævnte).

Optagehæv

Denne justering skal være meget nøjagtig.

CrO₂ bånd ilægges.

Tonegenerator tilsluttes AMPLIFIER indgangen, og indstilles til at afgive 333 Hz og ca. 30 millivolt.

LF voltmeter tilsluttes 2TP7E7 (2TP8E7).

Record pause aktiveres.

Record potentiometrene indstilles til der måles 100 millivolt i 2TP7 (2TP8).

LF voltmeter tilsluttes 2TP3D4 (2TP6D2).

Spændingen i 2TP3 (2TP6) aflæses og noteres.

Tonegeneratorens frekvens ændres til 19 kHz.

Record potentiometrene reguleres således, at spændingen i 2TP3 (2TP6) er nøjagtig den samme ved 19 kHz som ved 333 Hz.

LF voltmeter tilsluttes 2TP7E7 (2TP8E7).

Med 2L203D6 (2L103D5) justeres til der måles 1,35 volt i 2TP7 (2TP8)

(svarer til +22,7 dB ved 19 kHz i forhold til 333 Hz).

FOR SERVICE MANUALS
CONTACT:
MAURITRON TECHNICAL SERVICES

www.mauritron.co.uk

TEL: 01844 - 351694

FAX: 01844 - 352554

PPM

Tonegeneratoren indstilles til at afgive 333 Hz og ca. 300 millivolt.

LF voltmeter tilsluttes 2TP3D4 (2TP6D2).

Record pause aktiveres.

Record potentiometrene indstilles til der måles 725 millivolt i 2TP3 (2TP6).

2R233E7 (2R133E7) justeres indtil +2 dB lysdioden netop tænder.

Dolby filter

Der monteres en modstand på 1 Mohm fra slettehovedet til den negative pol på 2C201D1 (2C101D1) (2TP1 (2TP4)).

Record potentiometrene stilles i maximum.

REC. aktiveres (uden LF signal tilført).

Oscilloscop tilsluttes 2TP3D4 (2TP6D2).

2L201D4 (2L101D1) justeres til minimum.

1 Mohm afmonteres.

Tilføjelse:

Skewing

Dolby NR omskifteren stilles i stilling NR C.
 Tonegenerator tilsluttes AMPLIFIER indgangen, og indstilles til at afgive 19,9 kHz (± 200 Hz) og 200 millivolt.
 LF voltmeter tilsluttes 2TP3D4 (2TP6D2).
 REC aktiveres.
 Record potentiometrene indstilles til der måles 300 millivolt i 2TP3 (2TP6).
 2L202D4 (2L102D1) justeres til minimum udslag på LF voltmeteret i 2TP3 (2TP6).

ELECTRICAL ADJUSTMENTS

Electrical adjustments of Beocord 6002/8004 are made as shown on page 6-4, 6-5, and 6-6. Some adjustments in the Beocord 8004 have been changed in relation to Beocord 8002 (see below).

Record boost

This adjustment must be very accurate.
 Load CrO₂ tape.
 Connect AF voltmeter to 2TP7E7 (2TP8E7).
 Activate record pause.
 Adjust the record potentiometers until a reading of 100 mV is obtained in 2TP7 (2TP8).
 Connect AF voltmeter to 2TP3D4 (2TP6D2).
 Take a reading of the voltage in 2TP3 (2TP6) and write it down.
 Change the tone generator frequency to 19 kHz.
 Adjust the record potentiometers in such a way that the voltage in 2TP3 (2TP6) is exactly the same at 19 kHz as at 333 Hz.
 Connect an AF voltmeter to 2TP7E7 (2TP8E7).
 Adjust with 2L203D6 (2L103D5) until 1,35 V is measured in 2TP7 (2TP8) (corresponds to +22,7 dB at 19 kHz in relation to 333 Hz).

FOR SERVICE MANUALS

CONTACT:

MAURITRON TECHNICAL SERVICES

www.mauritron.co.uk
 TEL: 01844 - 351694
 FAX: 01844 - 352554

PPM

Set the tone generator to generate 333 Hz and approx. 300 mV.
 Connect AF voltmeter to 2TP3D4 (2TP6D2).
 Activate record pause.
 Adjust the record potentiometers until 725 mV is measured in 2TP3 (2TP6).
 Adjust 2R233E7 (2R133E7) until the +2 dB LED is just glowing.

Dolby filter

Fit a 1 Mohm resistor from erase head to the negative pole on 2C201D1 (2C101D1) (2TP1 (2TP4)).
 Adjust record potentiometers to maximum.
 Activate REC. (without AF signal applied).
 Connect oscilloscope to 2TP3D4 (2TP6D2).
 Adjust 2L201D4 (2L101D1) to minimum.
 Remove 1 Mohm resistor.

ADDITION

Skewing

Adjust Dolby NR switch to position NR C.
